The book *The Nature of Language* addresses one of the most fundamental questions of mankind: how did language evolve, and what are the neurobiological and cognitive foundations of language processing? This monograph explores these questions from different perspectives to discuss the building blocks of language evolution and how they developed in the way they can be found in modern humans.

In nature, ideas come into conflict and bonding occurs, only because of instinct. God, on the other hand, transcends nature and is thus capable of calling us into relations of mutuality. Even though, in our freedom, we can resist this call, God succeeds where nature fails, since the demand for mutuality, if it is to be moral and universal, must cut across culture and across our "natural ...
