Hoping to surprise and impress the horse-loving Empress Elisabeth of Austria during her imminent visit to his ancestral home, the Duke of Buclington decides that he must invest in some of the best thoroughbred Hungarian horses. He had planned to take his lovely young daughter, Lady Aletha, to Hungary with him to buy them, but, when Queen Victoria sends him on an important errand to Denmark, he is then forced to send in her place his equestrian stalwart, Mr. James Heywood. Bitterly disappointed by this as she loves her father, Aletha slips away, secretly intending to catch up with Mr. Heywood on the Calais to Vienna train when it is too late for him to order her back to England. Beautiful as she is, she quickly attracts the unwanted attentions of a lecherous German traveller, but luckily a flabbergasted Mr. Heywood comes to her rescue just in time. After much cajoling, he is persuaded not to return her to her father but to take her with him, pretending that she is his granddaughter. Their mission is a great success. They find all the superlative horses that they were seeking, but Aletha loses her heart to a handsome and charming Hungarian Prince. And it seems that her deceit will become her undoing when he tells her that he can never marry her because she is not of noble blood.

Stuntwoman-turned-vampire hunter Dawn Madison is in London to find the local vampire Underground and wipe it out. But her own encounter with the bloodsuckers is beginning to affect her in some very sinister ways.

Learn what it takes to succeed in the the most in-demand tech job Harvard Business Review calls it the sexiest tech job of the 21st century. Data scientists are in demand, and this unique book shows you exactly what employers want and the skill set that separates the quality data scientist from other talented IT professionals. Data science involves extracting, creating, and processing data to turn it into business value. With over 15 years of big data, predictive modeling, and business analytics experience, author Vincent Granville is no stranger to data science. In this one-of-a-kind guide, he provides insight into the essential data science skills, such as statistics and visualization techniques, and covers everything from analytical recipes and data science tricks to common job interview questions, sample resumes, and source code. The applications are endless and varied: automatically detecting spam and plagiarism, optimizing bid prices in keyword advertising, identifying new molecules to fight cancer, assessing the risk of meteorite impact. Complete with case studies, this book is a must, whether you're looking to become a data scientist or to hire one. Explains the finer points of data science, the required skills, and how to acquire them, including analytical recipes, standard rules, source code, and a dictionary of terms Shows what companies are looking for and how the growing importance of big data has increased the demand for data scientists Features job interview questions, sample resumes, salary surveys, and examples of job ads Case studies explore how data science is used on Wall Street, in botnet detection, for online advertising, and in many other business-critical situations Developing Analytic Talent: Becoming a Data Scientist is essential reading for those aspiring to this hot career choice and for employers seeking the best candidates.

Passion mingles with espionage in this reader favorite, first published in 1985. Susan has never known anyone like Cord Blackstone, the sexy black sheep of his family. Cord has a score to settle with the Blackstones--the same genteel clan that sheltered Susan after her husband's death. Cord will stop at nothing to punish the Blackstones, but what if that means ruining the one woman who can't stop loving him?

Symposium S, "Nanostructured Metal Oxides for Advanced Applications," was held April 1-5 at the 2013 MRS Spring Meeting in San Francisco, California. Metal oxides represent an appealing and assorted class of materials, whose properties cover the entire range from metals to semiconductors to insulators and almost all aspects of material science, chemistry and physics in a very broad application area. In the past few years, progress has been made on the synthesis, structural, physical, and chemical characterization of self-assembled and hierarchically-assembled metal oxide nanostructures that exhibit size-dependent properties. In these proceedings, attention is paid to the synthesis, structural and functional characterization of self-assembled nanostructures and architectures of all metal oxides with application potentials, with particular consideration given to the capability to tailor and control material properties via surface and structural modifications.
