Baltagi. Views and Stata as well as SASr programs are provided for the empirical exercises.

Hayashi Econometrics Solution - Kora
Nov. 25, 2003, Revised Dec. 27, 2003 Hayashi Econometrics Solution to Chapter 2 Analytical Exercises 1. For any $\gamma > 0$, $\text{Prob}(|z_n| > \gamma) = 1/n$ $\gamma > 0$. So, $\lim_{n \rightarrow \infty} \text{Prob}(|z_n| > \gamma) = 0$. On the other hand, $E(z_n) = n^{-1} n^{-1} + 1/n - n^{-2} = n^{-2}$, which means that $\lim_{n \rightarrow \infty} E(z_n) = 0$. As shown in the hint, $(z_n)^2 = (z_n E(z_n))^2 + 2(z_n E(z_n))(E(z_n) - E(z_n)) + (E(z_n) - E(z_n))^2$

Solution to Chapter 2 Analytical Exercises
