Automation in aviation can be a lifesaver, expertly guiding a plane and its passengers through stormy weather to a safe landing. Or it can be a murderer, crashing an aircraft and killing all on board in the mistaken belief that it is doing the right thing.

You'll be in the cockpits of the two doomed Boeing 737 MAXs, the Airbus A330 lost over the South Atlantic, and the Bombardier Q400 that stalled over Buffalo. You'll discover exactly why a Boeing 777 smacked into a seawall, missing the runway on a beautiful summer morning. And you'll watch pilots battling — sometimes winning and sometimes not — against automation run amok. This book also investigates the human factors at work. You'll learn why pilots might overlook warnings or ignore cockpit alarms. You'll observe automation failing to alert aircrews of what they crucially need to
