Practical Grade 12 Solutions

Whereas, dihybrid is helpful for studying inheritance pattern of dominant and recessive characters for two different traits.

Over here, we can find out all possible genotypic combinations. Examples  
Monohybrid. When a cross is made between a tall plant (TT) and a dwarf plant

# Read Book Monohybrid And Dihybrid Crosses

(tt), the two resulting F1 offspring are tall (Tt).

---

What is the Difference Between a  
Monohybrid Cross and a ...

Monohybrid parents have only a single trait difference, when they are crossed or breed

# Read Book Monohybrid And Dihybrid Crosses

the process is so called monohybrid cross while in a dihybrid, parents have two trait difference and when they are crossed the process is dihybrid cross. Monohybrid is used to study the inheritance of a single pair of alleles, whereas dihybrid is used to study the inheritance of two pairs of alleles.
