Expect more top branded items from Samsung, Sony, Fitbit ... display stickers, batteries and user manual. The easy to use instant camera is perfect for capturing selfies and close-up shots ...

In the past 50 years, consumers' buying situations have not become easier. Consumers remain easily overwrought by complex buying situations that involve buying complex products or services, such as laptops or insurances. In such situations, consumers find it difficult to make a decision and must spend high levels of cognitive effort on it. Prior consumer research has addressed the complexity of buying situations in several research streams such as in choice complexity or product complexity literature. However, previous researchers have not reached consensus on what constitutes the complexity of a buying situation. Furthermore, they have mostly concentrated on cognitive constructs and emotional constructs have been rather unexplored. To close these research gaps, this dissertation provides an in-depth conceptualization of complex buying situations by developing a comprehensive reference framework. Furthermore, this dissertation differs from prior research by examining in detail negative emotional responses to complexity (NERCO). A reliable and valid NERCO scale is developed that consists of two factors, emotional resignation and fear of post-purchase dissonance. An experiment investigates the influence of two input variables of the reference framework (1. the number of alternatives in the consumer's price class and 2. the perceived expertise of the salesperson who provides a recommendation in a buying situation) on perceived choice complexity and on NERCO. This dissertation paves the way for numerous directions for future research on the complexity of buying situations by providing theoretical fundamentals in the form of a detailed conceptualization and by precisely defining the research gaps.

Seeking the Truth from Mobile Evidence: Basic Fundamentals, Intermediate and Advanced Overview of Current Mobile Forensic Investigations will assist those who have never collected mobile evidence and augment the work of professionals who are not currently performing advanced destructive techniques. This book is intended for any professional that is interested in pursuing work that involves mobile forensics, and is designed around the outcomes of criminal investigations that involve mobile digital evidence. Author John Bair brings to life the techniques and concepts that can assist those in the private or corporate sector. Mobile devices have always been very dynamic in nature. They have also become an integral part of our lives, and often times, a digital representation of where we are, who we communicate with and what we document around us. Because they constantly change features, allow user enabled security, and or encryption, those employed with extracting user data are often overwhelmed with the process. This book presents a complete guide to mobile device forensics, written in an easy to understand format. Provides readers with basic, intermediate, and advanced mobile forensic concepts and methodology Thirty overall chapters which include such topics as, preventing evidence contamination, triaging devices, troubleshooting, report writing, physical memory and encoding, date and time stamps, decoding Multi-Media-Messages, decoding unsupported application data, advanced validation, water damaged phones, Joint Test Action Group (JTAG), Thermal and Non-Thermal chip removal, BGA cleaning and imaging, In-System-Programming (ISP), and more Popular JTAG boxes - Z3X and RIFF/RIFF2 are expanded on in detail Readers have access to the companion guide which includes additional image examples, and other useful materials
