Let X be the sum of the dice rolls. Therefore $X = \sum_{i=1}^{100} X_i$. By linearity of expectation, we write $E[X] =$

(a) Every feasible solution (x_1, x_2, x_3) has $x_1 \leq 2$, so $2x_1 \leq 4$. Together with the first constraint, this implies $f = 2x_1 + (3x_1 + x_2 - x_3) \leq 4 + (-2) = 2$. (Another approach is to write the dual problem and show that it has a feasible solution.)
