In 14 original essays, The Oxford Illustrated History of the Book reveals the history of books in all their various forms, from the ancient world to the digital present. Leading international scholars offer an original and richly illustrated narrative that is global in scope. The history of the book is the history of millions of written, printed, and illustrated texts, their manufacture, distribution, and reception. Here are different types of production, from clay tablets to scrolls, from inscribed codices to printed books, pamphlets, magazines, and newspapers, from written parchment to digital texts. The history of the book is a history of different methods of circulation and dissemination, all dependent on innovations in transport, from coastal and transoceanic shipping to roads, trains, planes and the internet. It is a history of different modes of reading and reception, from learned debate and individual study to public instruction and entertainment. It is a history of manufacture, craftsmanship, dissemination, reading and debate. Yet the history of books is not simply a question of material form, nor indeed of the history of reading and reception. The larger question is of the effect of textual production, distribution and reception - of how books themselves made history. To this end, each chapter of this volume, succinctly bounded by period and geography, offers incisive and stimulating insights into the relationship between books and the story of their times.

The Oxford Illustrated History of the World is the story of humanity itself, from earliest times to the present day, and the changes--good and bad--which have shaped our world.

World War Two re-assessed for a new generation, from the 1930s through to the beginnings of the Cold War. This book provides a stimulating and thought-provoking new interpretation of one of the most terrible episodes in world history.

Numerous illustrations, maps, and genealogies illuminate the often murky period ranging from the fall of Rome to the dawn of the Renaissance, with discussions of religious, political, economic, and social movements.

In 14 original essays, this book reveals the history of books in all their various forms, from the ancient world to the digital present

The Renaissance is one of the most celebrated periods in European history. But when did it begin? When did it end? And what did it include? Traditionally regarded as a revival of classical art and learning, centred upon fifteenth-century Italy, views of the Renaissance have changed considerably in recent decades. The glories of Florence and the art of Raphael and Michelangelo remain an important element of the Renaissance story, but they are now only a part of a much wider story which looks beyond an exclusive focus on high culture, beyond the Italian peninsula, and beyond the fifteenth century. The Oxford Illustrated History of the Renaissance tells the cultural history of this broader and longer Renaissance: from seminal figures such as Dante and Giotto in thirteenth-century Italy, to the waning of Spain's 'golden age' in the 1630s, and the closure of the English theatres in 1642, the date generally taken to mark the end of the English literary Renaissance. Geographically, the story ranges from Spanish America to Renaissance Europe's encounter with the Ottomans—and far beyond, to the more distant cultures of China and Japan. And thematically, under Gordon Campbell's expert editorial guidance, the volume covers the whole gamut of Renaissance civilization, with chapters on humanism and the classical tradition; war and the state; religion; art and architecture; the performing arts; literature; craft and technology; science and medicine; and travel and cultural exchange.

A survey of 4,500 years of international performance history covers the significant movements, writers, performers, and everts from traditional and avant-garde theater

The Oxford Illustrated History of Science is the first ever fully illustrated global history of science, from Aristotle to the atom bomb - and beyond. The first part of the book tells the story of science in both East and West from antiquity to the Enlightenment: from the ancient Mediterranean world to ancient China; from the exchanges between Islamic and Christian scholars in the Middle Ages to the Chinese invention of gunpowder, paper, and the printing press; from the Scientific Revolution of sixteenth and seventeenth century Europe to the intellectual ferment of the eighteenth century. The chapters that follow focus on the increasingly specialized story of science since end of the eighteenth century, covering experimental science in the laboratory from Michael Faraday to CERN; the exploration of nature, from intrepid Victorian explorers to twentieth century primatologists; the mapping of the universe, from the discovery of Uranus to Big Bang theory; the impact of evolutionary ideas, from Lamarck, Darwin, and Wallace to DNA; and the story of theoretical physics, from James Clark Maxwell to Quantum Theory and beyond. A concluding chapter reflects on how scientists have communicated their work to a wider public, from the Great Exhibition of 1851 to the internet in the early twenty-first century.

This is the most authoritative account of life in Medieval Europe between the fall of the Roman Empire and the coming of the Renaissance. Full coverage is given to all aspects of life in a thousand-year period which saw the creation of western civilization: from the empires and kingdoms of Charlemagne, the Byzantines, and the Hundred Years War, to the ideals of the crusades, the building of great cathedrals and the social catastrophe of the Black Death; the cultural worlds of chivalric knights, popular festivals, and new art forms. The chapters show the movement of the centre of gravity in European life from the Mediterranean to the north; and the authors explore the contrast between Byzantine and Renaissance cultures in the south and the new, complex political and social structures of north-west Europe, which by 1300 had the most advanced civilization the world had ever seen.
